Please note:
Can be bought as individual parts or as a complete system.
Please contact us with particular requirements.

OE TIMESAVER

- Using the TIMESAVER system with its foolproof operation will ensure that the times recorded are correct and relevant. The job of the organisers will consequently be made easier and the time recorded by every fence judge will be valuable in providing a complete record of horse times around the course. Therefore disputes over hold-ups should be a thing of the past, or at worst resolvable by collating timing information around the course and assessing the complete picture that those times paint.
- **Timesaver MASTERCLOCK** - Synchronises the whole system (to be kept in the organisers office)
- **Timesaver XL SLAVE** - Used at Start/Finish, Vet gates and D Box (at 3 Day Events), where quick easily visible timings are required
- **Timesaver JUMBO SLAVE** - Used at each fence. Records the actual time of day that any horse took off (jumped) a particular fence or carriage passed a particular obstacle.
- **Timesaver XL PROBE & JUMBO PROBE** - are used to very quickly transfer the time from the masterclock to whichever size of slave clock.
- 3 atm water resistance on all slave products. The masterclock should be kept dry because of the socket that the probe plugs into.
